

# Texas State Soil and Water Conservation Board Clean Water Act §319(h) Nonpoint Source Grant Program FY 2017 Workplan 17-10

SUMMARY PAGE						
	SCH					
Title of Project	Continued Statewide Delive	ery of the Texas Well Owner Network				
Project Goals	<ul> <li>Continued statewide implementation of the Texas Well Owner Network (TWON) program through (1) "Well Educated" programs of 4-6 hours, and (2) "Well Informed" programs of 1-2 hours</li> <li>Improve and protect well water and surface water quality by increasing awareness of water quality issues and knowledge of best management practices (BMPs) through improved private well management</li> </ul>					
Project Tasks		(2) Coordination and delivery of TWON We	ell Educated and			
	Well Informed events, and	(3) Evaluate the effectiveness of TWON trai	nings			
Measures of Success	<ul> <li>Increase well owner awareness of water quality issues and knowledge of BMPs through distribution of TWON publications and delivery of 60 TWON Well Educated and Well Informed events</li> <li>Deliver at least 30 TWON Well Educated (4- to 6-hour) events in selected watersheds</li> <li>Deliver at least 30 TWON Well Informed (1- to 2-hour) events in selected watersheds</li> <li>Measure impact of program delivery through participation in TWON events and increased knowledge and understanding of program participants</li> </ul>

Project Partners	
Names	Roles & Responsibilities
Texas State Soil and Water Conservation Board (TSSWCB)	Provide state oversight and management of all project activities and ensure coordination of activities with related projects, TCEQ and the Texas Groundwater Protection Committee.
Texas Water Resources Institute (TWRI), Texas A&M AgriLife Extension Service	Project coordination and administration. Maintain the TWON website/educational material clearinghouse. Assist in development and distribution of TWON press releases and publications.
Texas A&M AgriLife Extension Service – Department of Soil and Crop Sciences (SCSC)	Project coordination with watershed coordinators, County Extension Agents and groundwater conservation districts; update and tailor educational materials and programs to local conditions; deliver programs; provide content management for TWON website/educational material clearinghouse; and conduct program/educational material evaluations.
Texas A&M AgriLife Extension Service – Department of Biological and Agricultural Engineering (BAEN)	Assist with developing supplemental TWON materials and delivering educational programs.
Texas Water Development Board (TWDB) and the Texas Alliance of Groundwater Districts	Support coordination with the Texas Alliance of Groundwater Districts as appropriate in order to communicate project goals, activities, training opportunities and accomplishments to affected parties.

### Water Quality Impairment

Describe all known causes (i.e., pollutants of concern) and sources (e.g., agricultural, silvicultural) of water quality impairments or concerns from any of the following sources: 2014 Texas Integrated Report, Clean Rivers Program Basin Summary/Highlights Reports, or other documented sources.

This project will continue statewide implementation of the TWON program. Watersheds and aquifers will be selected in collaboration with the TSSWCB and with input from other interested groups including groundwater conservation districts (GCDs), County Extension Agents (CEAs), river authorities and Soil and Water Conservation Districts (SWCDs). Many of the watersheds and aquifers selected are described in the *Texas NPS Management Program* or identified as impaired in the *2014 Texas Integrated Report*.

The U.S. Geological Survey (USGS, DeSimone et al. 2009) reported that nitrate was the most commonly detected contaminant in private wells derived from man-made sources at concentrations greater than the EPA Maximum Contaminant Level (MCL). A second finding was that total coliform bacteria were detected in 34% of sampled wells. The MCL goal for fecal coliform bacteria, including *Escherichia coli*, in drinking water is zero.

For 2003-2008, the TWDB reported that for the 3,861 private water wells sampled, the percentage of wells exceeding the nitrate MCL varied from 2% to 50% each year, depending on the region. Additionally, results of well screenings conducted by the Texas A&M AgriLife Extension Service from 2003-2009 indicated that about 33% of private wells in Texas contain coliform bacteria.

## **Project Narrative**

#### Problem/Need Statement

Over 1,000,000 private water wells in Texas provide water to citizens in rural areas and increasingly to those living on small acreages in the rural-urban interface. Public drinking water supplies are generally of good quality and are monitored through requirements of the federal Safe Drinking Water Act; however, private well owners are independently responsible for monitoring the quality of their wells and frequently at greater risk for exposure to compromised water quality.

Management and protection of private water wells are under the control of the landowner, and therefore, depend primarily on education rather than regulation. To address the issues described above, which affect both surface water and groundwater, SCSC, BAEN and TWRI have developed TWON to deliver a science-based, community-responsive education curriculum. TWON focuses on protecting groundwater quality and aquifer integrity, and also complements the successful Texas Watershed Steward program by emphasizing the importance of implementing BMPs. The two most common private well pollutants, fecal coliform bacteria and nutrients, also are the most frequent cause of waterbody impairment or concern in Texas. It is likely that in many cases, local release of fecal coliform bacteria and nutrients is not limited to contamination of the property owner's private well and that these contaminants are transported off-site and contribute to pollutant loadings in surface waterbodies.

TWON provides training to Texans regarding water quality and BMPs for protecting their wells and surface waters, which averts off-site transport of contaminants (bacteria and nutrients) to surface waters, prevents contamination of underlying aquifers, and safeguards the health of landowners and their families. As a result, this program supports ongoing watershed protection planning efforts being conducted by TSSWCB and others by expanding the reach of these programs to additional audiences and resulting in greater BMP implementation for water quality improvement and protection. This project builds upon and continues the impact of TSSWCB projects #10-04 and 13-08, "Preventing Water Quality Contamination Through the Texas Well Owner Network" and "Statewide Delivery of the Texas Well Owner Network." Project information is at <a href="two.tamu.edu">two.tamu.edu</a>, and a final report for the initial TWON project (10-04) is available at <a href="http://twri.tamu.edu/media/545634/tr-463.pdf">http://twri.tamu.edu/media/545634/tr-463.pdf</a>.

#### **Project Narrative**

#### General Project Description (Include Project Location Map)

This project will continue statewide implementation of the TWON program, which builds institutional and local capacity to improve and protect both well water and surface water quality by improving awareness of water quality issues and increasing knowledge of BMPs. The training includes methods for safeguarding well water quality for landowners and their families and others relying on the availability of high quality groundwater stored by aquifers. Because improved understanding of water quality, human impacts and management practices to improve well and surface water quality will help to forestall off-site transport of coliform bacteria and nutrients to surface waters, TWON is an effective tool to bring to bear in WPP and TMDL implementation where investigations indicate bacterial and nutrient contributions. The program is delivered through (1) "Well Educated" programs of 4-6 hours, (2) "Well Informed" programs of 1-2 hours, and (3) evaluation of the program so that needed modifications and improvements can be made. Both versions of the program include opportunities for participants to have a water well sample screened for bacteria, nitrate and total dissolved solids (TDS). Program activities, deliverables, accounting and reporting will be managed by TWRI in cooperation with SCSC and BAEN.

TWON Water Well Events. A total of 60 Well Informed and Well Educated programs will be delivered; a minimum of 30 TWON Well Informed (approximately 10 each year) and 30 TWON Well Educated (approximately 10 each year) programs will be delivered throughout the project to provide wellhead protection information and recommendations for remediating well contamination, if appropriate. Educational materials such as the TWON Handbook, factsheets and PowerPoint modules developed through TSSWCB projects #10-04 and 13-08, "Preventing Water Quality Contamination Through the Texas Well Owner Network" and "Statewide Delivery of the Texas Well Owner Network,"

will be used. Trainings will be delivered by the TWON Coordinator, BAEN and/or SCSC Program Specialists and/or the SCSC Associate Professor and Extension Specialist, as appropriate. TWON educational programs are delivered in two forms: 1) Well Informed events will be scheduled for areas where the watershed coordinator or CEA recommends short and extremely focused events not lasting more than 2 hours, and 2) Well Educated programs will usually be delivered in other areas for more comprehensive, specific topics through a 4- to 6-hour event.

TWON Educational Program Topics. The TWON education curriculum emphasizes BMPs for safeguarding private well water quality and aquifer integrity. The TWON curriculum and publications include the following topics:

- Interpretation of well water screening results
- Watershed and groundwater hydrology and the importance to neighbors and the public of safeguarding aquifer integrity and groundwater quality
- Proper siting of drinking water wells and avoiding improper well construction techniques
- Proper maintenance and protection of the wellhead
- Proper household waste management
- Improperly sited and functioning on-site wastewater treatment systems
- Maintenance, aging and failure of on-site wastewater treatment systems
- Effects of land use changes on well water quality
- Locating and properly plugging abandoned wells

Selection of Screening/Training Locations. SCSC will collaborate with the TSSWCB and other state and local organizations to select locations for TWON events. SCSC will coordinate efforts with state agencies and organizations already involved in WPP/TMDL processes or who are planning future WPP/TMDL processes in specific watersheds.

Well Water Analyses. For both TWON Well Educated and Well Informed events, participants will be encouraged to arrive with private well water samples, collected using the Soil, Water and Forage Testing Laboratory water collection procedures (<a href="http://soiltesting.tamu.edu/files/waterweb1.pdf">http://soiltesting.tamu.edu/files/waterweb1.pdf</a>). Samples will be screened for nitrate, salinity concentrations and arsenic for areas where these contaminants are of concern according to the Texas NPS Management Program Appendix D Groundwater Constituents of Concern Report. For participants with positive results, remediation instructions and/or a recommendation and instructions will be given for sending follow-up samples to an accredited NELAC laboratory to perform drinking water analyses.

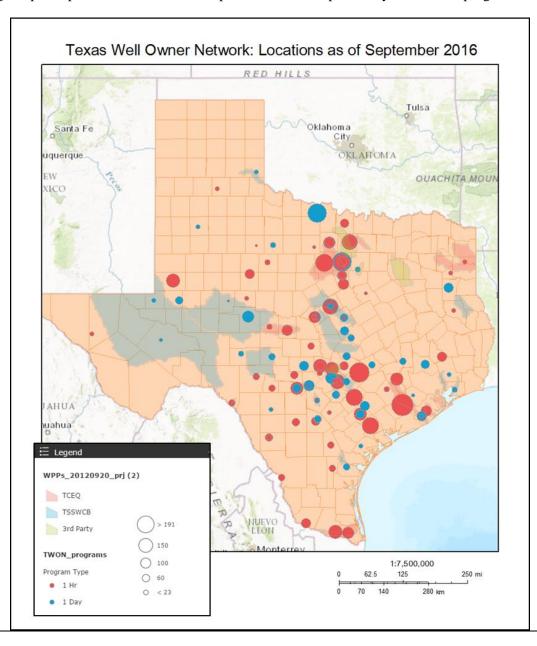

Screening for *E. coli* bacteria will either be conducted on-site or at Texas A&M University by the SCSC Program Specialist or nearby NELAC-certified laboratory representatives will be available at the beginning of the program to accept samples for analyses at their laboratories or participants will be issued a discounted voucher to be taken to the nearest cooperating NELAC-certified lab. During most of the screenings, results of bacterial analyses will not be available before the training is completed. Bacterial screening results and remediation instructions or recommendations for additional testing will be emailed or mailed to the participants, which allows them to receive bacterial screening results privately. Participants who use the voucher provided during the longer 4- to 6-hour trainings to submit a sample for bacterial analyses to a NELAC-certified lab will have begun the recommended practice of testing their water annually for fecal-indicator bacteria. TWON will request participants' permission to receive copies of bacterial lab results so that appropriate remediation recommendations and materials may be forwarded to those with positive analyses.

Most participants will be responsible for the cost of their water sample screening analysis (approximately \$10-\$20/sample depending on the laboratory or supplies used). Previous experience with private well water screenings has indicated that requiring a nominal fee improves attendance because the community perceives the program as being developed for all rather than targeting those with financial need. However, for underserved and student audiences, and by individual request through the CEA or watershed coordinator, costs of analyses will be underwritten by the project through the purchase of necessary supplies.

As a result of the training, participants will more clearly understand the relationships between practices in or near their well and the quality of water available for their families and other families pumping from the same formation. To increase delivery of the educational materials to a greater audience, any new or updated TWON educational materials will continue to be posted online (<a href="http://twon.tamu.edu/fact-sheets/">http://twon.tamu.edu/fact-sheets/</a>) as they are developed to make them readily available to the public.

Assessment. An evaluation approach that was developed through TSSWCB projects #10-04 and #13-08 will be used to measure both knowledge and behavior changes of program participants. A pre-test/post-test evaluation strategy will be implemented at the beginning and end of each training event. The pre-test will ask knowledge-based questions and the post-test will measure knowledge change of participants. In addition, the post-test will include 'intentions to change' questions that will focus on behaviors that participants should adopt based on what they have learned.

A one year follow-up evaluation instrument will also be administered to participants via online technology. Emails will be sent to program participants to determine which practices were adopted one year after the program.

## **Project Goals (Expand from Summary Page)**

This project will continue statewide implementation of the TWON through (1) Well Educated programs of 4 to 6 hours, and (2) Well Informed programs of 1 to 2 hours. The goals of the project are to improve and protect both groundwater and surface water quality by increasing awareness of water quality issues and knowledge of BMPs through improved private well management. Project goals will be achieved through (1) 30 (approximately 10 per year) Well Educated programs, (2) 30 (approximately 10 per year) Well Informed programs, and (3) evaluation of the program to measure knowledge gained, BMPs adopted and to determine if modifications and improvements need to be made to the programs. Both versions of the program include opportunities for participants to have a water well sample screened for fecal indicator bacteria, nitrate and TDS. If water quality standards are exceeded, recommendations for determining contamination sources and resolving issues are provided.

#### **Measures of Success (Expand from Summary Page)**

Increase well owner awareness of water quality issues and knowledge of BMPs through:

- Distribution of TWON publications and delivery of TWON well screenings and trainings
- o Delivery of 60 TWON Well Educated and Well Informed events.
- o Delivery of at least 30 (approximately 10 each year) 4 to 6-hour TWON Well Educated programs in selected watersheds
- Delivery of at least 30 (approximately 10 each year) 1- to 2-hour TWON Well Informed programs.

Measure impact of program delivery through:

- Numbers of citizens participating in TWON programs and unique visitors to website
- o Increased knowledge and understanding of individuals participating in the program, as measured by pre-/post-tests and one-year follow-up evaluations
- Intention to adopt or adoption of recommended BMPs as indicated by pre-/post-tests and one-year follow-up evaluations.

## 2012 Texas NPS Management Program Reference (Expand from Summary Page)

## Components, Goals, and Objectives

Component 1 – Explicit short- and long-term goals, objectives and strategies that protect surface and ground water. LTG: Protect and restore water quality affected by NPS pollution through assessment, implementation and education

- 1. Focus NPS abatement efforts ...and available resources in watersheds and aquifers as identified as impacted by NPS pollution.
- 2. Support the implementation of state, regional, and local programs to prevent NPS pollution through assessment ... and education.
- 4. Support the implementation of state, regional, and local programs to reduce NPS pollution to groundwater through the *Texas Groundwater Protection Strategy*, based on the potential for degradation with respect to use.
- 7. Increase overall public awareness of NPS issues and prevention activities.

STG Two – Implementation: Implement TMDL I-Plans and/or WPPs and other state, regional and local plans/programs to reduce NPS pollution...potentially degraded with respect to use criteria by NPS pollution.

• Objective C – Develop and implement BMPs to address NPS constituents of concern in aquifers identified as impacted by or vulnerable to NPS pollution.

STG Three – Education: Conduct education and technology transfer activities to help increase awareness of NPS pollution and activities which contribute to the degradation of waterbodies, including aquifers, by NPS.

- Objective A Enhance existing outreach programs at the state, regional, and local levels to maximize the effectiveness of NPS education.
- Objective B Administer programs to educate citizens about water quality and their potential role in causing NPS pollution.
- Objective D Conduct outreach through the CRP, AgriLife Extension, SWCDs, and others to enable stakeholders and the public to participate in decision-making and provide a more complete understanding of water quality issues and how they relate to each citizen.

Objective E – Implement outreach and education activities identified in the *Texas Groundwater Protection Strategy* to prevent NPS impacts to groundwater.

Component 2 - Working partnerships and linkages to appropriate State, interstate, Tribal, regional, and local entities, private sector groups, and Federal agencies.

Component 3 - Balanced approach that emphasizes both statewide NPS programs and on-the-ground management of individual watersheds.

# EPA State Categorical Program Grants – Workplan Essential Elements
